

AF-Colenco Ltd is a successful Swiss engineering company belonging to the world-wide operating ÅF Group. We are specialised in the fields of energy and environmental technology. Our engineers are specialists and all-rounders ensuring the market success of our company as well as our dynamic development.

To strengthen our **Electrical Networks** Department we are looking for a

Senior Project Manager – Electrical Grid in South East Asia

with university degree in Electrical Engineering

We offer challenging assignments:

Analysing and extending an existing power system grid, and its implementation (Power Grid Study, load flow and short circuit analyses, design, procurement from bidding till final negotiations, contract of contractor, supervision till commissioning); duties include travel to different areas of existing transmission systems, assistance in the design, technical inspections and quality and cost control of the projects, assist in establishing a data base centre for power system studies and establishing the local Planning and Design Department.

We expect well-founded expertise and a strong character profile:

As Senior Project Manager you not only have extensive technical experience in Power Grid Studies, load flow analysis, SCADA, design, planning and construction of substations and transmission lines, you also provide excellent consultancy services to our governmental client in SE Asia. With your previous experience in managing large projects and technical teams in developing countries, you are able to confidently tackle this Greenfield project. Willingness to travel and live in SE Asia as well as proficiency in English is required.

We look forward to receiving your application - and the pleasure to meet you personally:
